Nosilec predmeta/Lecturer:

doc. dr. Damijana Mojca Jurič

Jeziki/ Predavanja/Lectures:

slovenski/Slovenian

Languages:

Vaje/Tutorial:

slovenski/Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vpis v drugi letnik.

The prerequisite for participation is enrolment in the second year of study.

Vsebina:

Content (Syllabus outline):

Splošna farmakologija.

- Uvod v farmakologijo
- opredelitev in področja farmakologije
- Osnove predpisovanja zdravil.
- recept, vrste in farmacevtske oblike zdravil, odmerki, odmerjanje zdravil pri odraslih in otrocih, shranjevanje različnih vrst zdravil, režimi izdajanja zdravil, centralna baza zdravil
- Farmakodinamika
- osnovni mehanizmi in mesta delovanja zdravil, odnos med odmerkom in učinkom zdravila, medsebojno delovanje zdravil, receptorji
- Farmakokinetika

General pharmacology.

- *Principals of Pharmacology*
the meaning and fields of pharmacology
- *The basics of prescribing medications*
the prescription, types and pharmaceutical forms of medications, dosages, administering medication to adults and children, storage of different types of medications, regimens of giving out medication in pharmacy, register of medicinal products
- *Pharmacodynamics*
basic mechanisms and points of drug actions, relationship between dosages

- absorpcija, porazdelitev in metabolizem zdravil, izločanje zdravil iz telesa.
- *Interakcije med zdravili*
- *Neželeni učinki zdravil*
- Vplivi starosti, spola, prehrane in okolja na delovanje zdravil.
- *Uvajanje novih zdravil*
- predklinično in klinično preizkušanje zdravil.

Specialna farmakologija.

- *Farmakologija avtonomnega živčevja*
živčni prenašalci in receptorji v avtonomnem živčevju, zdravila z delovanjem v parasimpatičnem sistemu, zdravila z delovanjem v simpatičnem sistemu, lokalni anestetiki
- *Farmakologija kardiovaskularnega sistema*
kardiotonični glikozidi in snovi z inotropnim učinkom, antiaritmiki, zdravila za zdravljenje angine pectoris, zvišanega krvnega tlaka in hiperlipoproteinemije
- *Farmakologija ledvic*
diuretiki
- *Farmakologija krvi*
antianemijska sredstva, antikoagulantna sredstva, inhibitorji agregacije trombocitov, fibrinolitiki
- *Farmakologija prebavil*
zdravila za zdravljenje peptične razjede, emetiki in antiemetiki, odvajala, antidiaroički, spazmolitiki, zdravila, ki učinkujejo na jetra
- *Farmakologija dihal*
antiastrmatiki, ekspektoransi in mukolitiki, zdravila, ki pomirjajo kašelj
- *Farmakologija endokrinega sistema*
antidiabetiki
- *Farmakologija osrednjega živčevja.*
nevrotransmitterji v osrednjem živčevju, anksiolitiki, uspavala, antipsihotiki, antidepresivi, antiepileptiki, splošni anestetiki, antiparkinsoniki, analgetiki, depolarizirajoči in nepolarizirajoči mišični relaksansi, zdravila in snovi, ki povzročajo zasvojenost

and effect of medications, interactions of medicines, receptors

- *Pharmacokinetics.*
absorption, distribution, metabolism and secretion of drugs
- *Drug interactions*
- *Adverse effects of drugs*
- The effects of age, gender, diet and environment on the efficiency of drugs
- *Introducing new medications*
pre-clinical and clinical testing

Special pharmacology

- *Pharmacology of the autonomic nervous system.*
neurotransmitters and receptors in the autonomic nervous system, drugs acting in parasympathetic system, drugs acting in sympathetic system, local anaesthetics
- *Pharmacology of the cardiovascular system.*
cardiotonic glycosides and substances with an inotropic effect, antiarrhythmic agents, medications for the angina pectoris disease, high-blood pressure and hyperlipoproteinemia
- *Pharmacology of the kidneys*
diuretics
- *Pharmacology of blood*
antianemic substances, anticoagulant agents, thrombocytes aggregation inhibitors, fibrinolytics
- *Pharmacology of the gastrointestinal tract*
drugs for treatment of peptic ulcer, emetics and antiemetics, laxatives, antidiarrhoeal medications, spasmolytics, medications affecting the liver
- *Pharmacology of the respiratory system.*
antiastrhmatics, expectorants and mucolytics, medications that soothe coughs.
- *Pharmacology of the endocrine system*
antidiabetics
- *Pharmacology of the central nervous system*
neurotransmitters and receptors in the central nervous system, anxiolytics, hypnotics, antipsychotics,

<ul style="list-style-type: none"> - <i>Antiseptiki, dezinficijensi in insekticidi.</i> skupine, predstavniki, učinkovitost in uporaba, repelenti in insekticidi - <i>Kemoterapevtiki in antibiotiki</i> osnove antimikrobnega zdravljenja, antibakterijska zdravila, ki zavirajo sintezo nukleinskih kislin, celične stene, in proteinov, fungicidi, antivirusne snovi in snovi proti AIDS, citostatiki. antiseptiki za sečila, zdravila proti črevesnim zajedalcem, antimalariki. amebicidi, snovi, ki vplivajo na imunski odgovor. - <i>Nekatere zastrupitve in antidoti</i> 	<p>antidepressants, antiepileptics, general anaesthetics, antiparkinsonians, analgetics, depolarizing and nondepolarizing muscle relaxants, medications and substances that cause addiction.</p> <ul style="list-style-type: none"> - <i>Antiseptics, disinfectants and insecticides</i> groups, representatives, performance and usage, repellents and insecticides - <i>Chemotherapy agents and antibiotics.</i> basics of antimicrobial treatment, antibacterial drugs that inhibit nucleic acid, cell wall and protein synthesis, fungicides, antivirus substances and substances against AIDS, cytostatic medication, antiseptics for the urinary system, medications against intestinal parasites, antimalarials, amebicides, substances with an impact on the immune response - <i>Some intoxications and antidotes</i>

Cilji in kompetence:

Učna enota prispeva k razvoju naslednjih splošnih in specifičnih kompetenc:

- usvojiti temeljno znanje s področja farmakologije,
- razumeti dognanja farmakodinamike in farmakokinetike,
- seznaniti se z osnovnimi oblikami zdravil, ravnanjem z njimi in z osnovami predpisovanja zdravil,

Objectives and competences:

The learning unit mainly contributes to the development of the following general and specific competences:

- acquiring fundamental knowledge in the field of pharmacology,
- learning fundamental knowledge in the field of pharmacokinetics, pharmacodynamics,

<ul style="list-style-type: none"> • poznati osnovne mehanizme delovanja zdravil, njihove učinke na organizem, poti presnove in izločanja, • spoznati skupine zdravil po farmakodinamskih učinkih, • poznati nevarnosti stranskih učinkov zdravil in posledic, ki lahko nastanejo pri neprimerni uporabi ali zlorabi zdravil in pozna potrebne ukrepe pri tem, • poznati vplive zdravil na plod, problem mutageneze, teratogeneze in kancerogeneze, • seznaniti se z etičnimi in znanstvenimi zahtevami pri preizkušanju in vrednotenju zdravil, • seznaniti se z racionalno in varno uporabo zdravil in z zdravstveno-ekonomskim pomenom potrošnje zdravil, • razvijati sposobnost za povezovanje in uporabo spoznanj z različnih znanstvenih ved in disciplin pri delu s pacientom, • vključevanje profesionalne etike, prepoznavanje in uporaba moralnih in etičnih načel pri delu, • sposobnost vsestranskega in sistematičnega prilagajanja obravnave pacienta glede na relevantne fizikalne, socialne, kulturne, psihološke, spiritualne in družbene dejavnike, • sposobnost prepoznati in interpretirati znake normalnega in spreminjajočega se zdravja (postavljanje diagnoz), • sposobnost spoštovati pacientovo dostojanstvo, zasebnost in zaupnost podatkov, • sposobnost informirati, izobraževati, vzgajati in nadzorovati paciente/oskrbovance in njihove družine, • usposobljenost za vodenje zdravstvene dokumentacije, pisanje poročil in uporabo ustrezne tehnologije, 	<ul style="list-style-type: none"> • understanding the basic forms of medication, treatments and the basics of prescribing medications, • to be familiar with the basic mechanisms of medication effects, their effects on the organism, excretion through metabolic pathways, • to be aware of grouping medicines at the pharmacodynamic level – effects, • to know the risks, side effects of medications and their consequences, by unsuitable use or abuse and know the necessary measures in the case, • to know the effects of medications on fetus, the problem of teratogenesis, carcinogenesis and mutagenesis, • to be acquainted with the ethical and scientific requirements in testing and evaluation of medicinal products, • to be acquainted with the rational and safe use of medicines and health-economic importance of medication consumption, • inclusion of professional ethics, recognising and using moral and ethical principles at work, • the ability to adapt the individual all-round and systematic treatment according to the relevant physical, social, cultural, psychological, spiritual and social factors, • the ability to recognize and interpret the signs of a normal or changing health status (nursing diagnosis setup); • the ability to respect the patient's dignity, privacy and confidentiality of the data; • the ability to inform, educate raise awareness and monitor the patients and their families, • the ability to keep the record of nursing documentation, writing reports and using the modern technology, • the ability to actively promote health, to evaluate risk and to take

Predvideni študijski rezultati:

Znanje in razumevanje

Študent/študentka:

- se seznanijo z osnovnimi oblikami zdravil, ravnanjem z njimi in z osnovami predpisovanja zdravil,
- pozna in razume osnovne mehanizme delovanja zdravil, njihove učinke na organizem, poti presnove in izločanja,
- pozna skupine zdravil po farmakodinamskih učinkih,
- razume nevarnosti stranskih učinkov zdravil in posledic, ki lahko nastanejo pri neprimerni uporabi ali zlorabi zdravil in pozna potrebne ukrepe pri tem,
- pozna vplive zdravil na plod, problem mutageneze, teratogeneze in kancerogeneze,
- seznanijo se z etičnimi in znanstvenimi zahtevami pri preizkušanju in vrednotenju zdravil, seznanijo se z racionalno in varno uporabo zdravil in z zdravstveno-ekonomskim pomenom potrošnje zdravil.

Intended learning outcomes:

Knowledge and understanding:

Students:

- get acquainted with basic forms of medications, their usage and with basics of prescribing medications,
- know and understand the basic mechanisms of medication effects, their effects on the organism, and excretion through metabolic pathways,
- know the categorising of medicinal products by pharmacodynamic effects,
- know the categorising of medicines at the pharmacodynamic level – effects,
- know the risks, side effects of medications and their consequences, by unsuitable use or abuse and know the necessary measures in the case,
- know the effects of medications on fetus, the problem of teratogenesis, carcinogenesis and mutagenesis,
- are acquainted with the ethical and scientific requirements in testing and evaluation of medicinal products,
- are acquainted with the rational and safe use of medicines and health-economic importance of medication consumption.

Metode poučevanja in učenja:

- *predavanja* z aktivno udeležbo študentov (razlaga, diskusija, vprašanja, primeri, reševanje problemov),
- *seminarske vaje*: priprava, predstavitev in uspešen zagovor seminarske naloge (reševanje problemskih situacij, študije primera, kritično presojanje, diskusija, refleksija).

Learning and teaching methods:

- *lectures* with active student participation (explanation, discussion, questions, examples, problem solving),
- *tutorial*: preparation, successful seminar paper presentation (problem solving, case studies, critical evaluation, assessment, discussion, reflection, project work, team work, individual work).

Načini ocenjevanja:	Delež (v %) Weight (in %)	Assessment:
Načini: - izpit Ocenjevalna lestvica: ECTS.	100 %	Types: - exam Grading scheme: ECTS
